

Acknowledgments

The production of this work owes a debt of gratitude to many people. Above all, we wish to express our thanks to the legions of colleagues in the Advanced Placement Calculus Program. In many ways, this guide represents the total accumulation of contributions from them all, including fellow readers at the AP Calculus Exam Reading and the teachers in our own schools. Some of them deserve special mention. These include:

The Chairs of the Development Committee we have served with, whose guiding hands were a comfort and whose commitment to the program was exemplary: Anita Solow and Thomas Dick.

The members of the AP Calculus Development Committee we served with: Sally Fischbek, Art Grainger, Joe Milliet, Stella Ashford, Mary Ann Connors, Ben Klein, Nancy Gates, Ray Cannon, Nancy Stephenson, David Bressoud, and Ruth Dover. The time we spent with them increased our knowledge of and passion for teaching Calculus.

The Chief Readers we worked with at the AP Calculus Reading, whose care and expertise were an inspiration: George Rosenstein, Ray Cannon, Bernie Madison, Larry Riddle, Caren Diefenderfer, and Michael Boardman. We learned a great deal from each of them.

Our friends from the Educational Testing Service and the College Board: Chan Jones, Gloria Dion, Craig Wright, Judy Broadwin, and Fred Kluempfen. We were fortunate to work with such committed, knowledgeable, and friendly professionals.

Our editor, Gary Litvin from Skylight Publishing, offered countless suggestions and improvements, kept the project moving, and treated us with the utmost patience and courtesy in the face of stressful deadlines.

Our reviewers, whose care and attention to detail significantly improved this book: Steve Olson, Bernie Madison, Ray Cannon, Barb Currier, Nancy Stephenson, JT Sutcliffe, and Maria Litvin. They caught many mistakes and offered invaluable advice for better presentation of the material.

Finally, we thank our families, Jack, Beth, and Kevin, Maureen and Ryan, without whose love and support this book would not have been possible.

Mark Howell and Martha Montgomery
